

LEAD GUARANTEE

All our Lead Strip products are manufactured using proven high quality solvent acrylic adhesives.

This means that when applied correctly, using industry standard techniques and boning tools, that they will give a minimum 10 years service insitu. This level of performance can only be guaranteed when lead strip is applied on both sides of the outer pane (i.e. surfaces 1 and 2 in IG construction).

Custom Glass do not guarantee the performance of the lead component from weathering under extreme conditions either on initial installation or during the period of service.

Custom Glass offer a range of coated lead strips with Brass and Antique finishes as well as Silver as standard.

All these products are designed to give protection to the lead surface as well as a decorative effect.

Long term exposure to high levels of UV light can reduce the initial colour intensity after installation. However it is expected that under normal site conditions that the coating will give many years service and remain integral at the surface of the lead.

The use of abrasive cleaning materials, solvents or other chemicals should be avoided when cleaning any lead or coated surfaces.
